Category Name V0 Data Migration

Actionee HAIS

Sub Category

Subject

Population of Release A for Test

Description of Problem or Suggestion:

Present plans show little if any data migration to Release A prior to test.

Originator's Recommendation

By CDR, work out with DAACs and Project a plan to define the data and metadata that must be in the Release A system at delivery for test and to accomplish its migration prior to the start of the test period.

The plan to define the data and metadata that must be in the Release A system at delivery for test is being developed initially between the ECS Data Migration Team and ECS System I&T. The draft plan will be provided to the ESDIS Project and the DAACs involved for review prior to the Release A CDR. The general approach is to create samples (~ 2 %) of Release A migrated data and metadata after Release A CDR when the physical design and hardware/software specifications are definitized for the Release A DAACs. The migrated samples of data and metadata will then be incorporated in early System I&T beginning in late 1995 to prove that the samples of migrated data and metadata successfully support early testing of the system design. Additional (~ 8 %) Release A data and metadata will be migrated in the ECS Development Facility prior to Release A Consent to Ship Review (CSR) to further verify that the migrated data and metadata support more mature testing of the system design. However, it is expected that majority of Release A migration (~ 90 %) will occur at the Release A DAACs after CSR and the installation of the ECS Release A system software. Population of the Release A DAAC data servers will likely require re-ingesting any data and metadata initially migrated at the ECS Development Facility (~ 10 %) as part of establishing initial operations at the Release A DAACs.
